## NUT TREE NURSERIES

JOHN W. HERSHEY, *Owner*

**DOWNINGTOWN, PA.**

This Nursery is the National Headquarters for  
Information on Scientific Tree Crop Culture

**If you have not received our illustrated catalog, write for it.**

**Tree crops** increase income by harvesting crops from unplowable acres. Decreases feed costs on cattle and poultry raising. Makes game profitable.

### CONSULTANT SERVICE

To make a tree crop planting or ornamental setting it is of paramount importance to know what to plant for best results in a desired effect or for commercial return. The most important factor is the rehabilitating an old worn-out farm economically and profitably. It is our policy if the customers wish, to look over locations, give planting advice and then keep in contact with our customers after the planting is made until a working knowledge of nut growing has been acquired by the planter.

The cost of this service is nominal. The experiences of our customers have proofed that this service is invaluable. Think it over.

### Terms

All orders from new customers must be accompanied with a 25% deposit, balance C. O. D., or money to be forwarded before shipment is made. Old customers can have terms made agreeable to the occasion. All prices f.o.b. Downingtown.

Our responsibility ceases when shipment has been delivered to the hands of the carrier (or transportation agency).

Six sold at the dozen rate and three of any one variety can be selected in making up the dozen rate, 50 at the hundred rate.

*No order where an affidavit* must accompany invoice will be considered for less than \$10.00.

## Plants for Wildlife Feeding

This is one of the most complete lists of nursery stock for wildlife ever offered. Also note the ornamental effect of this list for farm and landscape plantings.

A game program without permanent feed is futile. Adequate plantings of woody food-bearing plants is the solution.

Criticism of game management, either state or federal, is childish. Pitch in and help them by setting an example to the public by planting your own lands and sponsoring club plantings, thereby being the pacemaker for law-makers and backers-ups of game commissions.

### *How to Plant a Border for Best Results in Bird Feeding*

Standard trees set 30 to 40 feet apart in the back. Then set the 20-25 ft. growing species between and in front. Intersperse with the 5 to 10 ft. growing sizes and use in rows in front.

The ultimate effect will be an ornamental bank nearly all year—a solid hawk screen where birds can feed in safety and scoot to cover among the low bushes if attacked by predatory birds.

This stock is limited and so's game without food. How many can you use? All hard to transplant stock cut back and wax dipped to insure the highest possible survival.

Please note—this stock is grown in quantity and except with a few species where demand warrants it, we cannot fill orders in less than 50 plants. As a special concession will accept orders of 25 for 25% increase over hundred rate.

Blue print of above described border, \$1.00. It is decidedly clearer than any description.

Approx. Height of Growth	Name	Price Per 100	Price Per 1000
